13. Other:					
/Boyer D. Ashley/ Supervisory Patent Examiner, Art Unit 3724					

Continuation of 11, does NOT place the application in condition for allowance because: The applicant contends that the combination of Miyamoto in view of Hallenbeck does not disclose the caliumed invention in at least that Miyamoto does not disclose the features of a motor assembly being pivotally supported by the support assembly, and that the support assembly remains stationary relative to pivotal movement of the motor assembly. These arguments are not found persuasive. Referring to col. 22, lines 15-18 of Miyamoto, Miyamoto discloses that in addition to the motor case being slidable along the guide arm 100, it is also rotatable about the lateral shaft 281 a or fixed in position. Miyamoto continues to disclose in col. 25, lines 3-6, that Tby simply lightening or loosening the knob screw 281, the motor case can be attached or detached from the frame and the blade angle changes can be effected in an easy and safe namence... Finally, as the blade assembly and motor are shown in Figure 30, it is obvious that during movement of the blade into various bevel positions, the motor is also rotated about the knob screw 281 and lateral shaft 281 a, as there is no structure provided that would allow for relative adjustment between the two. In regards to the applicant's contention that Elder does not disclose that the bars 52 are considered discossed on element 80. It is noted that the bars 52 are considered discossed on element 80, through the saw table 20.
